Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 2-37 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shartle et al., Columbus, Subramanian et al. or Cottingham.

See the appropriate paragraph of paper 10.

Response to Arguments

Applicant's arguments filed 11/22/02 have been fully considered but they are not persuasive.

Applicants remarks that Bochner and Livingston were convincing and these rejections have been vacated.

Applicants state Shartle and Columbus fail to teach a device where the fluid is able to pass through the reaction chambers by capillary action alone without an outside force. It is well settled the method of intended use has no patentable moment upon an apparatus permitting the apparatus has the capability to be used in the same manner. Both references teach (look in their abstracts for example) capillary channels connecting the various chambers which has been properly read on the pending claims.

Applicant states Subramanian fails to teach a sample receiving chamber, specific channels and a reaction chamber. Subramanian teach in column 6 lines 12+ teach the ~~channels in the structure have "... continuous capillarity such that the sample is drawn~~ into the stack ..." which has been read on the claimed capillary channels. Additionally, column 11 describes cartridge(101) in figure 1 as having capillary passage(21) that

Art Unit: 1743

leads from sample application site(11) to branch point(31) and to assay stacks(51,52).

Assay stacks(51,52) are vented. The Office has read the claimed sample receiving chamber on application site(11), the distribution channel on passage(21) and branch point(31) and finally the reaction chamber on the assay stacks(51,52).

Applicants state Cottingham teaches a device having sample application wells where the sample passes through the device by a combination of capillary action and gravity/hydrostatic pressure. The instant claim language is open and does not exclude additional forces such as gravity/hydrostatic pressure.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
